PROFESSIONAL EXPERIENCE

LOKER STUDENT UNION

Long Beach, CA

Backend Developer

2024–Present

- Led backend infrastructure expansion by migrating to a microservices architecture which has a supporting of 200% increase in user traffic within nine months.
- Developed automated diagnostic tools with REST API integration and Docker containerization by reducing the issue of resolution time by 40%. Contributed to a 20% increase in total company revenue through backend services.
- Integrated over 10 third-party services via RESTful APIS while expanding service offerings and enhancing functionality for end users.

GOOGLE

Mountain View, CA

Software Engineer

2022–2023

- Conducted regular code reviews and adhered to Devops methodologies by ensuring smooth and reliable deployment of software updates which increases deployment frequency by 25%.
- Revamped the architecture for Tensor Processing Units (TPUs) utilizing Golang as a backend, resulting in 50% increased system reliability and enhanced performance through rigorous testing protocols to identify critical bottlenecks. Also worked on Shipping software to other companies and maintained consistency.
- Streamlined processes for the TPU System utilizing both Java and Python; these optimizations led to improved operational efficiency by 70%, alongside comprehensive documentation facilitating cross-team knowledge sharing.

CHANNEL PRO COMMUNICATIONS

New York, NY

Software Engineer

2019–2022

- Led the development team of interactive web applications using React, Angular and Docker with YAML concepts focused on system efficiency increase by 30%. Have also maintained a clear and precise documentation throughout the database management system using SQL and RDBMS.
- Redesigned and deployed machine learning models using ML algorithms for analyzing the decision making process more easily by improving 50% for 1000 daily users for a single software application.
- Enhanced payer-provider interactions by creating a cloud-based solution for processing insurance claims.

EDUCATION

CALIFORNIA STATE UNIVERSITY - DOMINGUEZ HILLS

Carson, CA

Master of Science in Computer Science

2023–Present

Awards and Honors

- **Dean's List**, CSUDH, Fall 2023 & Spring 2024
- **Outstanding Computer Science Student Award**, CSUDH, 2024

PROJECTS

Improving Low-Resource Machine Translation with Large Language Models

- Restructured a machine learning translation system using Large Language Models (LLMs) by improving BLUE scores for low-resource languages by 30%.
- Designed and upgraded the workflow of how the mBART and opus100 datasets can have common languages for low-resources and high-resource language models. Compared how the baseline NMT and LLM would perform on both the languages.
- In Progress: Still Need to enhance the workflow of the process with high definition process using GPT 4.0 and GPT 3.5 turbo.

Stock Analysis and Prediction Dashboard

- Proposed a Python-based dashboard using Streamlit by enabling real time stock data visualization and technical analysis with indicators like EMA, RSI and ADX.
- Established machine learning forecasting with Facebook Prophet which provides customizable prediction timeframes and interactive forecast visualization for trading decisions.
- Implemented yfinance and Plotly to create visualizations that improved data clarity for users on both desktop and mobile devices.

RevOps Nexus Project

- Created comprehensive documentation alongside the new revenue tracking library on GitHub that highlighted key functionalities, providing insights to fix three major causes of financial discrepancies across departments during audits.
- Deployed the library on GitHub with CI/CD pipelines, automating updates and improving deployment efficiency by 25%, particularly during quarterly system audits.
- Architected a microservice using Spring Boot and Swagger to expose functionalities via RESTful APIs, streamlining AR processes for business and finance departments and improving activity tracking for the Games Room.
- Implementing Liquibase for database management and Spring Cloud for distributed settings while aiming to reduce downtime by 50% during large or complex system-wide updates.

ADDITIONAL INFORMATION

Technical Skills:

- Programming: Golang, Java, JavaScript, Python, C/C++, C#, YAML
- Databases & Query Languages: SQL, MySQL, Oracle, PostgreSQL, RDBMS, Database Systems
- Front End Technologies: React, Angular, HTML, CSS, Vue.js, Test Automation
- Backend & Frameworks: Spring Boot, Spring Cloud, Swagger, RESTful APIs
- Cloud & Devops Tools: Docker, AWS, GCP
- Machine Learning and Data Science: ML algorithms, Streamlit, EMA, RSI, ADX, Facebook Prophet, yfinance, Plotly, Data Protection
- Software Engineering & IT: Software Development, Software Architecture, Software Engineering, Software Design, Design Patterns, Testing, Code Review, Coding Standard, Ads Software, Design Experience, Operating System, Design Specification, Debugging
- Project Management & Business: Project Management (PM), Customer Service, Business Operations, Occupational Health, Quantitative Analysis, Data Analysis, Design thinking
- Languages: Fluent in Telugu (native), English; Conversational Proficiency in Japanese

Certifications:

- **AWS Certified Developer - Associate:** Amazon Web Services
- **MIT Certified:** Data Science and Machine Learning.
- **Georgia Tech:** Data Structures and Algorithms
